Unified Integration Experience, Designed to Expand Acumatica

Acumatica’s partnership with Vertify allows users to leverage customizable integrations and get advanced functionality through AcuSync.

AcuSync, powered by Vertify, offers...

**Configurable Integrations**
No developer time or need for backend coding; Vertify allows you to maintain and upgrade integrations without technical support.

**Connect to Anything**
AcuSync extends Acumatica’s ability to connect to other commercially available systems, including CRMs, eCommerce, marketing automation, project/resource management, human resources/payroll, and even other ERPs.

**Embedded Solution**
AcuSync runs entirely within Acumatica; no additional software or hosting required.

**Visibility and Health Monitoring**
Ultimate visibility with pre-built dashboards that identify how integrations are running and what needs special attention. Dashboards can be customized and easily integrated into existing Acumatica dashboards and generic inquiries.

**Scale and Grow with Your Business**
AcuSync is designed to work with the Vertify platform when your integration needs grow. This provides additional performance and integrating systems outside of Acumatica while still providing a unified user experience.

**Supported Versions**
2018 R2 & 2019 R1/R2
