

Inspection & Checklist

The Inspection & Checklist module within the eWorkplace Apps' Quality Management Suite for Acumatica helps users standardize inspection procedures across key business processes. With centralized monitoring, traceability, and reporting, users can strengthen process compliance, maintain consistent inspection practices, and ensure required checks are completed.

Key Features

- Define inspection plans that specify the procedures, requirements, and acceptance criteria users should follow at different stages of a business process.
- Create predefined checklists and group related checks to ensure critical requirements are consistently verified during inspection activities.
- Apply inspection and checklist at relevant stages such as purchasing, production, and shipping to verify that required conditions are met before moving forward.
- Provide users with predefined inspection procedures and checklists to promote consistent execution across production processes.
- Monitor inspection status, outcomes, pending activities, and trends through a centralized dashboard for better visibility into inspection operations.
- Generate reports containing inspection details, checklist activities, results, status, and observations for documentation, review, and audit purposes.

Why Inspection & Checklist?

- Standardize inspection steps and procedural requirements to help users follow defined processes consistently across applicable business activities.
- Identify visible defects, missing information, documentation gaps, packaging issues, and other concerns before they progress further in the process.
- Give teams a clearer view of pending and completed inspections, helping them identify outstanding activities and take timely action.
- Use predefined procedures and checklists to streamline recurring inspections, minimize manual follow-ups, and help users complete inspections more efficiently.
- Maintain documented evidence of inspection activities and completed checklists to support internal reviews, customer requirements, and audits.
