

Fuuz™ from MFGx Transportation Management Solution

Global and regional manufacturers need robust solutions for shipping management. TMS on the Fuuz platform delivers the tools manufacturers need to coordinate supplier and customer shipments with connectivity to their existing ERP and related systems.

Agile management of transportation is even more critical during this period of global supply chain shortages and shipping bottlenecks at ports and points of entry.

Fuuz TMS integrates with carriers and brokers to automate shipping processes by pulling data from existing ERP and WMS software solutions to trigger all required documentation and streamline product shipping and transportation. Mobile apps on the Fuuz platform make spreadsheets obsolete and enable smart devices on the shop floor for user convenience and improved efficiency.

Functionality

Use the Fuuz platform TMS to:

- Manage freight and shipments
- Schedule 3PL inbound and outbound shipments with visual dock calendars
- Collaborate and coordinate data with 3PLs
- Launch yard management tools
- Create load cubing
- Print all required documentation, including BOLs, packing slips, labels, load sheets
- Develop truck schedules based on weight limits, seasonal requirements, tarping and refrigeration, axle load limits, etc.

Fuuz™ is a cloud SaaS solution developed by MFGx, a Michigan-based software integration company, to connect multi-platform enterprise software, industrial equipment, operating systems, people and processes. For more, visit <http://www.fuuzplatform.com/>.
