

TIME COLLECTION METHODS

LightWork Software: Empowering you to do more & be more.

BIOMETRIC TIMECLOCKS

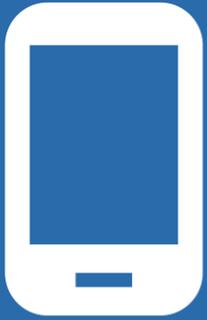

Strengthen and secure employee time.

The most cost-efficient punching method in the long-run, Biometric TimeClocks provide the most secure way to track your employees' time using unique fingerprints or facial recognition - eliminating the possibility of "buddy punching." This method also works directly with your Time and Attendance software, leaving little room for human error.

MOBILE

Make accessibility for all employees a priority.

Using mobile devices for time-tracking optimizes convenience for employees who work at multiple locations. Giving your employees time tracking capabilities from anywhere lessens the workload for those who need the ability to travel and still log their time.

ONLINE WEB ACCESS

Enable user-friendly features.

Save money and employ this robust method to track employee time, schedules, and more! This time-tracking method is also especially great for salaried employees: they can simply indicate which days they did not work, easing Paid Time Off calculations.

MOUNTED TABLET KIOSK

Combine the power of web access with a physical timeclock.

Access the user-friendly capabilities of online web access in an established location. This cost-effective and space-saving method works great for those who need to track their employees' time, but don't want to commit to a traditional timeclock.
