

A BETTER WAY TO MANAGE PRODUCTION EXISTS

Take control of your shop floor production
from anywhere with Protected Flow Manufacturing™

Work Order Status Board

Protected Flow Manufacturing™ (PFM) helps you drastically improve your visibility into production. Your team knows how to get the job done, the biggest challenges you face are making sure they are all tackling the right jobs and that they'll have the materials they need when they need them. Whether you are in the office, at home or on the road PFM's Work Order Status Board gives you and your team the insight needed to understand "Where are my jobs and how are they progressing?".

Varying Time Horizons

Understanding the load on the shop floor during any period can determine success or failure. The Work Order Status Board gives the ability to answer questions like "How do the next few weeks look?" or "Show me the next quarter"

The Right Visibility

Displaying the information you need when it's needed. Filter by Work Order status, by Customer or a number of attributes to get a quick understanding of "How are those specific jobs progressing?", "When will they finish?"

The Complete View

Stop losing sleep worrying about whether or not the varying subassemblies will be available when they're needed. Visually see all the Work Order's many dependencies aligned in the calendar relative to their status and projected finish.

Remote Management

PFM is a cloud-based application designed to work with your existing ERP. Whether you are in the office, at home or on the road PFM delivers visibility and control over all aspects of your shop floor production.

"We have much better control of the production floor, the backlog is shrinking, and we're not hearing from customers quite as frequently asking about their orders. Best of all, we're keeping our promises!"

– Cory Lee - Saturn Industries, Inc.

We'll Show You a Better Way

Contact us today to learn how PFM can give you the visibility and control you need to manage production with confidence and protect customer commitments.
