

Acumatica + Netstock: Smarter Inventory Planning for Food & Beverage

Still planning inventory with yesterday's data?

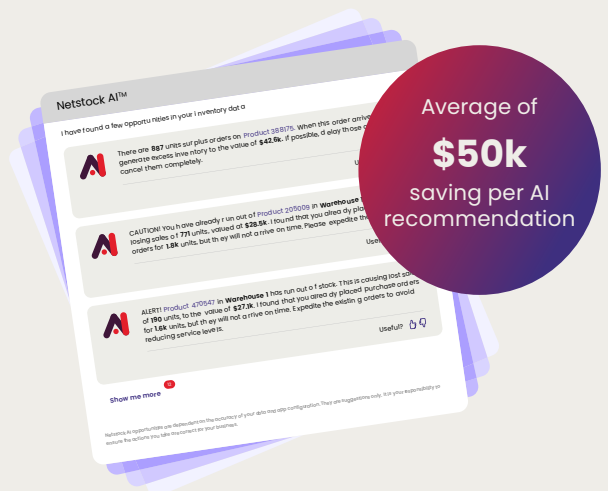

When shelf lives are short, demand shifts daily, and supplier delays impact availability, you need a solution that helps you stay ahead of problems **before** they impact your business.

By combining Acumatica's ERP data with Netstock's AI-powered inventory intelligence, **food & beverage businesses** can reduce spoilage, prioritize the SKUs that need attention, and make faster, smarter planning decisions.

Acumatica + Netstock = Better Together

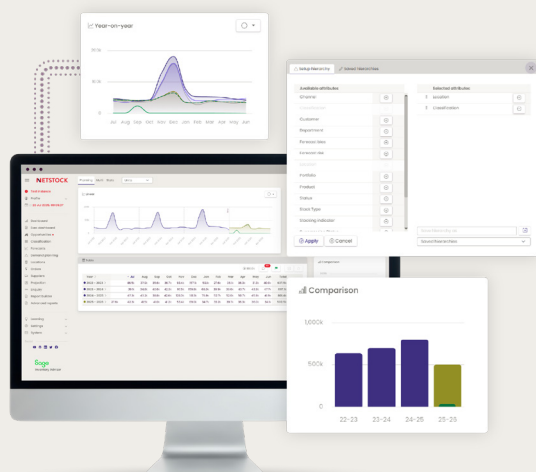

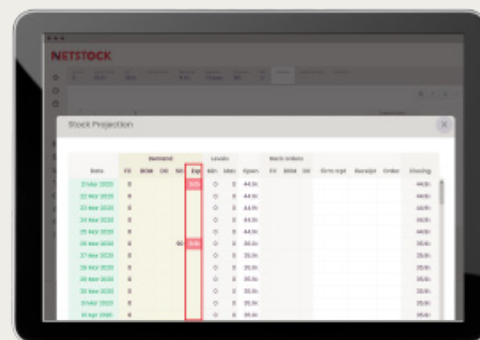

Act faster with AI-powered insights.

Netstock's AI capabilities add another layer of intelligence by helping teams identify problems before they become disruptions. Netstock's AI Opportunities recalculates priorities every 90 seconds. Automatically prioritizing critical SKUs, surfacing supplier risks, expiry issues, and demand shifts. On average, 70% of customers uncover \$50K+ in opportunities they didn't know existed. That's AI that delivers real results. No manual planning.

Expiry date management

You can reduce waste and improve inventory flow with Netstock's expiry date module. Gain visibility into stock nearing expiration and understand how much inventory is at risk of expiring before it can be sold or consumed, and factor expiring goods into purchasing decisions. Combined with real-time visibility across warehouses and distribution centers, teams can take proactive action to minimize spoilage and protect profits.

Stay ahead of demand shifts

Food and beverage businesses often deal with highly variable demand patterns, where a promotion, holiday period, weather change, or regional buying trend can dramatically shift sales volumes. Netstock uses advanced forecasting capabilities to help businesses accurately predict demand across different products, locations, and sales channels. This allows planners to better prepare for seasonal peaks, reduce excess stock, and avoid costly stock-outs on high-demand items.

The real business impact

35%

lower inventory holding

15%

higher fill rates

50%

improved forecast accuracy

70%

less planning time

"Netstock turned an unmanageable process into a structured, scalable one. I can't imagine trying to do this with spreadsheets today; it would take more than a full-time person." **Redmond Life**

Netstock is a leading demand and supply planning solution trusted by more than 2,500 customers worldwide. Managing \$26 billion in inventory, Netstock integrates seamlessly with leading ERPs and utilizes sophisticated AI to transform raw data into faster, clearer planning decisions, helping businesses reduce stock-outs and excess inventory while improving demand forecasting. By combining advanced analytics with intelligent automation, Netstock helps organizations stay agile, responsive, and profitable.
