Built by experts who understand inventory and demand planning realities.

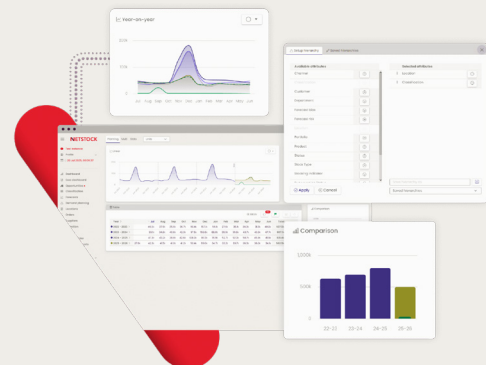

Inventory Optimization

Full visibility into inventory KPIs. AI flags risk, classifies SKUs, and adjusts safety stock, helping you prevent stock-outs and reduce excess inventory.

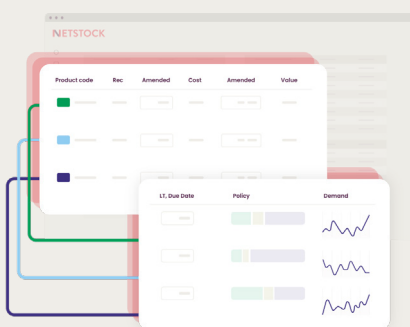

Inventory Forecasting

Accurate forecasts by product, channel, and location. Automatically factors seasonality and trends to improve planning and reduce stock-outs.

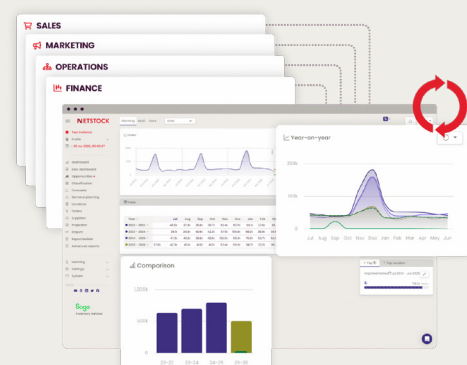

Demand Planning

Flexible planning across bottom-up, top-down, or middle-out. Align stakeholders and refine demand to improve purchasing decisions and optimize inventory.

Replenishment

AI-powered order recommendations across all locations. Automatically identify risks and optimize replenishment to balance stock levels.

Supplier Performance

Track supplier risk and performance. AI analyzes supplier data to dynamically adjust safety stock and flag delays early, protecting service levels.
