DONATION PROCESSING

Checks, credit cards, ACH, Wired funds – all can be processed to the individual donor's account quickly through the *ProNPO* enhancement to Acumatica. Once a donor's account is identified, the subsequent donations are automatically assigned to that Donor Record unless the assignment is changed.

REAL-TIME KPIS

Cloud-based – access from anywhere an internet browser is available on a device. The donations, the trends, the KPIS are updated in real-time. Track your progress to a campaign goal, a subscription base, or event participation. Watch the progress on your mobile device!

REPORTS

Supported by over 200 standard reports, OData, Power BI and three built-in report writers, getting your data out of Acumatica is as easy as inputting it. You can easily and quickly create your own reports or add a field or two to existing reports. CFBS will train your super-users to create the reports you need – and even those you just want!

SECURITY

Standard Acumatica instances are secured with two-factor authentication per user, complex passwords, role security, and restriction groups to only allow the appropriate people to access or view data. Credit card information is encrypted within the PCI compliant database (SaaS installations). Acumatica can also provide full audit trails to know exactly when transactions were made and who made them.
