# AI-Powered Predictive Control for ERP Project Delivery

A Smarter Way to Protect Your Project Portfolio

# From ERP Visibility to Forward-Looking Project Insight.

Acumatica is the leading, enterprise-grade cloud ERP trusted by organizations to run complex, project-driven operations with precision and control. It brings financials, project accounting, resource management, CRM, and operational workflows into a single cloud platform that scales with the business. Organizations rely on Acumatica to manage complexity, maintain financial clarity, and keep projects aligned with business objectives.

That foundation matters. When execution is structured, and data flows seamlessly across finance, operations, and projects, leaders gain confidence that work is moving in the right direction.

As projects grow and stakes increase, seeing what is happening today is only part of the picture. Leaders also need insight into what is forming next, before outcomes are affected.

That is where TrueProject adds the powerful new layer of *Strategic Project Intelligence* (SPI). With Acumatica providing enterprise ERP visibility, TrueProject's SPI interprets execution and stakeholder signals to reveal early risk, alignment shifts, and outcome pressure before they appear in reports.

## Predictive AI for Early Risk Prediction

*Strategic Project Intelligence* utilizes AI to identify early risk signals that emerge long before issues manifest in schedules. By analyzing patterns across execution data and stakeholder input, SPI identifies where outcomes are beginning to drift—while there is still time to act.

## AI That Interprets Signals, Not Just Data

Traditional project systems rely on lagging indicators. SPI applies AI to interpret leading indicators—sentiment shifts, engagement gaps, decision delays, and execution patterns—to reveal hidden pressure building beneath the surface of a project.

## AI Focused on Outcomes, Not Tasks

Rather than optimizing individual tasks, SPI applies AI to predict the probability of success and highlight what is eroding it. This enables leaders to make informed, preventative decisions before cost, schedule, or confidence are impacted.

# Acumatica + TrueProject: Where Enterprise Execution Meets Predictive Foresight

The Acumatica and TrueProject partnership provides clarity and foresight for effective project management. Acumatica delivers the enterprise-grade foundation that unifies financials, project accounting, resource management, CRM, and operational workflows. TrueProject extends that foundation with *Strategic Project Intelligence* (SPI), providing AI-driven predictive insights that help leaders understand how today's execution is likely to impact tomorrow's outcomes.

TrueProject for Acumatica ERP creates a connected view of delivery that combines system accuracy with real-world execution context, enabling leaders to act earlier and with greater confidence.

## Acumatica's ERP Foundation

A unified, real-time view of project financials, costs, billing, and margins

Integrated resource management and workload visibility across teams

Operational transparency across projects, finance, & business workflows

A reliable system of record that supports disciplined execution at scale

## TrueProject's *Strategic Project Intelligence*

AI-powered predictive insight into execution patterns and delivery trends

Early detection of risk, misalignment, and confidence shifts

Analysis of stakeholder participation, engagement, and sentiment

Intelligence that highlights where leadership attention is needed most

## What is TrueProject?

TrueProject is a SaaS-based *Strategic Project Intelligence* solution powered by predictive AI that foresees project risks weeks or even months in advance. By continuously analyzing project data and stakeholder input against key performance indicators, it delivers clear, actionable insights—empowering leadership to act decisively from any dashboard before problems ever surface.

## What Leaders Gain from the Combined Insight

Earlier visibility into what is forming, not just what has already occurred

Better alignment between project execution and business intent

Intervene while options are open, guided by what is going to happen

Greater confidence in project decisions, driven by context rather than hindsight

Blend Acumatica's ERP clarity with TrueProject's predictive intelligence to move beyond tracking what happened to shape what is going to happen actively. The result is not just better visibility, but sustained delivery confidence across every stage of the project lifecycle.

### Predictive Signals Built on ERP Data

Acumatica provides real-time visibility into costs, progress, and resources. TrueProject enhances foresight by identifying trends and patterns that indicate potential future delivery risks or instability.

### Stakeholder and Team Insight

Successful delivery depends on people, not just plans. TrueProject captures participation, responsiveness, and stakeholder sentiment to highlight shifts in confidence that operational data alone cannot reveal.

### Stronger Oversight Without Disrupting Work

TrueProject's SPI works alongside Acumatica without changing how teams operate. Leaders gain additional AI-recommended insight while teams continue working within familiar ERP-driven workflows.

### AI-Enabled Early Detection to Protect Financial Outcomes

By detecting execution risks early, organizations can protect margins, manage resource strain, and maintain customer confidence while staying aligned with Acumatica's financial controls.

## What Does This Mean for You?

The result is better outcomes, stronger client trust, and projects that stay aligned with business expectations from start to finish.
