## Using This Guide

This guide is provided to enhance your understanding of Acumatica licensing for Private Cloud Perpetual (PCP), Private Cloud Subscription (PCS), and Acumatica's Software as a Service (SaaS) subscription. Any examples presented in this guide are for illustrative purposes only. Acumatica, Inc. reserves the right to update the existing version of this document without advanced notice.

Any reference to system or software is a reference to Acumatica ERP software or SaaS subscription, unless stated otherwise. This guide covers the various aspects of Acumatica licensing, and it is important to read the document in its entirety to understand the various aspects of your license. While this document is referred to as the Acumatica Licensing Guide, it also covers Acumatica's Software-as-a-Service (SaaS) offering. Headings or sections that mention "license" or "licensing" may also apply to a SaaS subscription, where applicable.

Any capitalized words not defined in this document have the meaning as defined in the respective end-user license agreement or subscription agreement.

This guide does not supersede, replace, or modify any of the legal documentation covering use rights for Acumatica products or services. Specific product license terms are located at <http://www.acumatica.com/agreements>, as applicable.

# Licensing and SaaS Subscription

## Keys and Entitlements

Acumatica license keys (activation keys), are used to activate Acumatica products. License entitlements are what you are entitled to use based on the licenses you have acquired.

## Overview

Acumatica's licensing and SaaS subscriptions are designed to help small and midsize businesses save money by having to acquire only the licensing and services needed for their business areas. As the company grows or its needs change, added licenses can be acquired as needed. This makes the power and benefits of an Acumatica solution more affordable for all businesses.

When an organization is selecting Acumatica, there are two components to consider: the product editions and modules that provide specific product functionality, and the licensing and subscription method. There may be additional system and module constraints that are related but not directly tied to licensing that will be covered in this guide.

## Product Editions

Acumatica Cloud ERP functionality is delivered as editions that contain a collection of modules that are suited for specific industries and company sizes; additional modules can be selected to fit your specific needs. Here is an overview of the company size groupings, industries, and module availability that make up the various editions.

## Company Size

### Small Business

All small business editions are designed to meet the needs of smaller companies and include 5 named users and support for one tenant. Small business editions can optionally be upgraded to 10 named users. The included modules vary based on the industry edition selected. See below for more information on included and optional modules.

### Advanced

All Advanced editions are for most mid-market companies (10-250 employees) that require advanced financial capabilities and more robust ERP functionality; and include 5 tenants. Included modules vary based on the industry edition selected. See below for more information on included and optional modules.

### Enterprise

All Enterprise editions are for larger companies (250+ employees) that require advanced financial and ERP functionality and capabilities; and include 20 tenants. Included modules vary based on the industry edition selected. See below for more information on included and optional modules.

## Industry Specific Editions

### General Business

For businesses that do not fit into one of Acumatica's industry editions, you can purchase one of the general business editions. Below is a listing of all included and optional modules for the General Business Editions.

For Editions listed below:  module included,  module is available, "NA" module not available

Editions	Small Business	Advanced	Enterprise
<b>Acumatica Base System Modules</b>			
Financials	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Multiple Currencies	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Compliance (Construction Only)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
ProCore Integration	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Some Editions may not be available in all licensing and subscription models. Licenses for additional software that may be required to run Acumatica outside of our SaaS environment, such as Microsoft Windows Server and Microsoft SQL Server, are not included and would need to be purchased separately. However, they are not required when using Acumatica's Cloud ERP Subscription SaaS Services.

## Module-Specific Licensing

### Commerce Integration

The Commerce Integration allows a single shopping site to be integrated with the Acumatica ERP system. Additional licenses are required for connectivity to additional shopping sites or shopping platforms.

### Field Service: Scheduled Resources

Field Service Editions comes with base licensing for 10 field service personnel and 10 vehicles (10 P/V). Additional licenses are available for up to 50 P/V and for unlimited P/V.

### Portals

Acumatica Portals enable you to create a portal experience where customers and business partners can access their information, as well as create orders or open cases. An Acumatica Portal can be used as a Customer Portal, B2B Portal, B2B Ordering Portal, Case Management Portal, or a Financials Portal. An individual portal license is required for each company it is used with. Each individual portal license supports one portal website URL. Once the individual portal module is licensed, no additional user access licenses are required for that portal. Other modules may be required to expose certain functionality to the portal.

### Additional Processing Nodes

As used at Acumatica, a processing node is an application server that is linked to an Acumatica database. When users log into Acumatica, they are connecting to an application server (we can call it the Primary Processing Node). When there are integrations that produce a significant number of web API requests, adding one or more Additional Processing Nodes can help ensure that the web API load does not impact your Acumatica users experience. Another common use for Additional Processing nodes is for high availability and load-balancing configurations. Additional Processing Nodes are generally used in **two** primary ways:

1. **To increase performance**, to address two general situations

#### ***Heavy loads from Third-party integrations***

Leaving all users who log into Acumatica on the Primary Processing Node and pointing all third-party integrations to the Additional Processing Node. Heavy processing loads from the third-party integrations don't slow down users.

#### ***Power users running reports, imports, or other processes that create heavy loads***

Leaving all regular users on the Primary Processing Node and having all power users use the Additional Processing Node. Heavy processing loads from the power users won't slow down regular users.

2. **To provide load balancing** (by extension redundancy), using two general configurations

#### **Manual Load Balancing**

Have a Primary Processing Node and an Additional Processing Node, each with their own URL, and have users and/or third-party integrations use one of the two. If the processing node someone is using is down, users can simply point to the alternate URL. This is easy to setup and to manage technically but requires a conscious change by the user to switch systems should theirs fail. Additionally, it requires that users are manually load balanced between the two systems.

#### **Automatic Load Balancing**

The processing nodes (Primary and Additional) are setup in a cluster, utilizing only one URL, and the users and any third-party integrations use the one URL, the loads are automatically balanced between the two systems by the clustering system. This is more difficult to configure and requires more technical expertise to manage (if outside of Acumatica SaaS environment), but it is seamless and transparent to the users and integrations.

Customers can have many processing nodes, they are not limited to a Primary and one Additional Processing Node (example: there could be one Primary and 4 Additional Processing Nodes). Each Additional processing node will have the same parameters as the Primary Processing Node for the number of Web Services API Users, Concurrent Web Services API Requests, and Web Service Requests per Hour (or Minute). Therefore, this will also contribute to throughput capabilities of the overall system (all processing nodes and the database server).

## **Licensing and Subscription Models**

The Acumatica ERP solution is made available through one of three models: Software-as-a-Service (SaaS) subscription (most popular), Private Cloud Perpetual (PCP) Licensing, and Private Cloud Subscription (PCS) Licensing. Editions may not be available in all licensing and subscription models.

**Acumatica's SaaS Subscription** allows you to use the SaaS service with non-perpetual rights. The SaaS service includes the following: Acumatica's ERP software, the hardware required to host the software, hosting side Internet connectivity, hosting side firewalls, backups, and all costs associated with managing the server environment and with hosting operations. This model lowers the initial licensing costs, eliminates the costs associated with acquiring and maintaining servers for Acumatica ERP software and hosting infrastructure, and provides you with the flexibility to increase your subscription license as your business grows, or even decrease your license at any renewal term. Improvements, as defined in your subscription agreement, are included with your SaaS subscription, allowing the software and associated infrastructure to be kept up to date with the latest enhancements, patches, updates, and upgrades. The SaaS service generally provides the lowest total cost of ownership, the greatest flexibility for the customer, and the highest service availability. Visit <https://www.acumatica.com/acumatica-saas-faq/> for SaaS FAQs.

**Private Cloud Subscription (PCS) Licensing** allows you to use the software with non-perpetual rights, meaning that you can use the software during the term of your subscription. This model lowers initial licensing costs and provides you with the flexibility to increase subscription license counts as your business grows, or even decrease license counts at any renewal term. Software Updates (as defined in your license

agreement) are included with your PCS subscription, allowing you to keep the software up to date with the latest enhancements, patches, and upgrades. You can use PCS licensing when you want to have the ERP solution hosted and managed by your partner or any third party. Alternatively, the software may be deployed on your premises and can be self-managed or managed by your Authorized Acumatica Reseller.

**Private Cloud Perpetual (PCP) Licensing** allows you to use the software with permanent usage rights, meaning that you can use the licensed version of the software for as long as you choose. Perpetual licensing might be for you if you prefer a larger upfront investment, if you want to manage the solution internally, and if you will run the software on your premises (or will have it hosted by a third party per the license agreement). All subject to the terms of Acumatica’s End User License Agreement (EULA). Software Maintenance, as defined in your license agreement, may be purchased to receive software updates, which allow customers to keep the software up to date with the latest enhancements, patches, and upgrades.

## Licensing Methods

Acumatica provides its customers with the greatest licensing flexibility in the ERP industry. The various means of licensing are meant to provide customers, including those with unique requirements, with a tailored and affordable solution. In addition, Acumatica offers licensing models designed to allow private cloud customers (PCP and PCS) to deploy high-availability configurations without additional Acumatica costs.

Customers can license the ERP solution in one or more of the following ways: Consumption based (Transaction Tiers or Resource Levels), and User based (Named Users or Concurrent Users). Some of the modules listed in the Editions tables above have specific ways they are licensed and are covered below.

### Transaction Tiers

Transaction-tier licensing is based on monthly Commercial Transaction Volumes (CTV) and monthly ERP Transaction Volumes (ETV). Table 1 shows the various transaction tiers; higher tiers are also available.

Transaction Tiers	S1	S2	S3	M1	M2	M3	L1	L2	L3	L4	X1	X2	X3	X4	E1	E2	E3	E4	E5
<b>Transaction Limits</b>																			
Monthly Commercial Transaction Volume	1,000	1,500	2,000	3,000	4,000	5,000	7,500	10,000	15,000	20,000	30,000	50,000	75,000	100,000	150,000	200,000	300,000	400,000	500,000
Monthly ERP Transaction Volume	20K	30K	40K	60K	80K	100K	150K	200K	300K	400K	600K	1M	1.5M	2M	3M	4M	6M	8M	10M

**Table 1: Transaction Tiers**

The Monthly CTV is equal to the single highest volume of transactions within each of these transaction types: sales orders, shipments, AR invoices, customer payments, purchase orders, purchase receipts, AP invoices, and AP payments.

Here is an example of how CTV is measured for Acme Company for a single month: 800 AR invoices, 700 customer payments, 400 AP invoices, 200 vendor payments, and 500 sales orders. The single highest volume for the month was the 800 AR invoices, so Acme Company’s Monthly CTV for the given month would be 800.

The ETV is equal to the total number of times an Acumatica object is created or modified (essentially the same as clicking **Save** on an Acumatica form). It is unlikely that ETV would be reached before CTV are reached under normal use of the software by logged-in users. Since Acumatica is used as a platform, ETV is in place to account for custom development that utilizes the Acumatica platform in a manner that has very few CTV, yet the system is used extensively. (An example is someone creates a rental object to track rental transactions and creates 500 rental transactions per day.)

For your company to remain in compliance with CTV and ETV licensing requirements, your monthly CTV and ETV transaction volumes must not exceed your licensed monthly transaction volume for any three (3) months during a trailing twelve (12) month period.

## SaaS Data Storage

SaaS subscriptions come with a default amount of data storage space, additional space is available for a small fee.

Editions	Small Business	Advanced	Enterprise
Data Storage	50 GB	100 GB	150 GB

**Table 2: Included SaaS Data Storage**  
(for SaaS subscriptions initially purchased after 4/1/2019)

## Resource Levels

If you purchased Acumatica ERP prior to April 1, 2018 and/or are using resource-level licensing, please view the Acumatica Licensing Guide Supplement located at <http://www.acumatica.com/agreements>.

## Named Users

Named user licensing is based on the number of individual users licensed to use the Acumatica ERP system. Each named user must have his or her own user name and password; the sharing of user names by more than one individual is not permitted. This licensing does not limit the number of users that can be created in the system; it only limits the number of users that can be marked as active.

## Concurrent Users

Concurrent user licensing is based on the number of simultaneous users accessing the system at a given time. The number of concurrent users licensed would therefore restrict the system to allow only that number of simultaneous users to log in at any given time (see documentation for details).

If you are on a user-based license and an Acumatica offering is only defined for transaction tier licensing, then the following mapping of user-based licensing to transaction tier licensing shall apply:

Number of Users	1-10			11-25			26-50		51-100				101-250				251+				
Transaction Tiers	S1	S2	S3	M1	M2	M3	L1	L2	L3	L4	X1	X2	X3	X4	E1	E2	E3	E4	E5		

## System Recommendations and Constraints

In addition to the licensing based on functionality and usage described above, other parameters can affect system performance or access to specialized modules. These may vary depending on the selected licensing model (SaaS or PCS/PCP). Parameters that can impact system responsiveness are addressed in *System Recommendations for Consumption-Based Licensing*, while those that have strict limitations are addressed in *System Constraints*.

### Consumption-Based Subscriptions and Licensing

#### System Recommendations

The system recommendations listed in Table 3 (below) are designed to provide customers with guidance to help them achieve optimal performance. Customers surpassing these recommended limits may experience suboptimal operating conditions and a corresponding degradation in performance, but the system will not prevent the limits from being surpassed and there will be no violation of the license agreement.

Transaction Tiers	S1	S2	S3	M1	M2	M3	L1	L2	L3	L4	X1	X2	X3	X4	E1	E2	E3	E4	E5	
<b>System Recommendations</b>																				
Concurrent Users	50		100			250				500				1,000						
Daily Commercial Transaction Volume	100		300			500		1,000		2,500				7,500	10,000	15,000	20,000	25,000		
Daily ERP Transaction Volume	2K		6K			10K		20K		50K				150K	200K	300K	400K	500K		
Inventory Items *	50,000		100,000			200,000				250,000				300,000						
Fixed Assets *	1,000		5,000			10,000				20,000				20,000						
Business Accounts *	50,000		100,000			200,000				250,000				300,000						

\* Increasing above these recommendations can significantly impact performance if running reports or processes that query the full set

**Table 3: System Recommendations for Consumption-Based Subscriptions and Licensing**

#### System Constraints

The system constraints listed in Table 4 (below) are additional parameters of the Acumatica license agreement. Acumatica's ERP solution will either provide details of the thresholds that are surpassed or prohibit the user from performing operations that would exceed thresholds. These constraints are necessary to ensure normal system behavior and operation.

Transaction Tiers	S1	S2	S3	M1	M2	M3	L1	L2	L3	L4	X1	X2	X3	X4	E1	E2	E3	E4	E5
<b>System Constraints</b>																			
Lines per Transaction	1,000		1,500			2,000				2,500				3,000					
Serial Numbers per Document	2,000		5,000			7,500				10,000				10,000					
Web Services API Users	10		20			30				40				50					
Concurrent Web Service Requests *	1		3			6				10				20					
Web Services Requests per Minute *	50		100			150				250				500					

\* Per processing node

**Table 4: System Constraints for Consumption-Based Subscriptions and Licensing**

## User-Based Subscriptions and Licensing

### System Recommendations

The system recommendations listed in Table 5 (below) are designed to provide customers with guidance to help them achieve optimal performance. Customers surpassing these recommended limits may experience suboptimal operating conditions and a corresponding degradation in performance, but the system will not prevent the limits from being surpassed and there will be no violation of the license agreement.

Number of Users	1-10	11-25	26-50	51-100	101-250	251+
<b>System Recommendations</b>						
Daily ERP Transaction Volume	2K	6K	10K	20K	60K	300K
Daily Commercial Transaction Volume (CTV)	100	300	500	1K	3K	15K
Inventory Items *	50K	100K	200K		300K	
Fixed Assets *	1K	5K	20K		20K	
Business Accounts *	50K	100K	200K		300K	

\* Increasing above these recommendations can significantly impact performance if running reports or processes that query the full set

**Table 5: System Recommendations for User-Based Subscriptions and Licensing**

### System Constraints

The system constraints listed in Table 6 (below) are additional parameters of the Acumatica license agreement. Acumatica's ERP solution will either provide details of the thresholds that are surpassed or prohibit the user from performing operations that would exceed thresholds. These constraints are necessary to ensure normal system behavior and operation.

Number of Users	1-10	11-25	26-50	51-100	101-250	251+
<b>System Constraints</b>						
Lines per Transaction	1,000	1,500	2,000		2,500	3,000
Serial Numbers per Document	2,000	5,000	7,500		10,000	10,000
Web Services API Users	10	20	30		40	50
Concurrent Web Service Requests <sup>1,2</sup>	1	3	6		10	20
Web Services Requests per Minute <sup>1,2</sup>	50	100	150		250	500

<sup>1</sup> Per processing node, <sup>2</sup> Applies to SaaS only

**Table 6: System Constraints for User-Based Subscriptions and Licensing**

When user-based licensing is utilized, a user license is used for APIs connections; an example would be when connecting using a Web Services API.

## Monitoring of Console and License Compliance

Acumatica provides a License Monitoring Console form that is designed to provide one central location for viewing all license information, and to make it simple for customers to know their license usage. By using this real-world usage data, customers can determine if they need to consider increasing, or even possibly decreasing, their license needs.

The console provides license information, which includes the licensed number of monthly CTV and ETV; the recommended maximums for daily CTV, ETV, and number of users, if applicable; and system constraints for number of inventory items, business accounts, and other factors. For SaaS customers, there is also information regarding data storage sizing. You can see detailed statistics of system resource use by month, and by day, and view the warnings that have appeared when the system has exceeded the limits for resources specified in your license.

If the system is licensed utilizing transaction tiers, it will continue to operate even if the maximum CTV or ETV for a given license is reached. However, the system will log the information and warnings will be displayed on the License Monitoring Console form. If there are three such violations in any trailing 12-month period, the customer will be required to upgrade to a license tier that will accommodate its transaction volumes.

## Tenants

Each edition of Acumatica comes with the ability to have one tenant or multiple tenants. Within a single tenant, you can have an unlimited number of companies. Companies within a single tenant will share customers, vendors, employees, and the chart of accounts. Whereas customers can decide what elements should be separated or shared between companies in different tenants, such as the chart of accounts, vendors, customers, and employees. Additional Tenant license packs are available for all Acumatica Advanced and Enterprise editions. Whether the customer is using consumption-based or user-based licensing, the licensing will be applied to all companies and tenants. No additional licensing will be required as long as the total consumption or user count across all companies and tenants does not exceed the license limits.

## Price Protection

### Renewal Caps for SaaS and PCS subscriptions

Renewal prices for Acumatica PCS and SaaS subscriptions will not increase by more than 3% per year (price cap), as applied to the prices listed on the most current Order Form for these subscriptions; discounts listed on the Order Form will not apply to renewals. The 3% cap will apply as long as the customer is in compliance with the terms of its subscription agreements and any related documents, and as long as there is no reduction in the customer's edition, transaction tier, or number of users. If the customer's needs change during the initial subscription term, and this change would require access to a higher-level edition or transaction tier, or an increase in the number of users, then the customer's current discount will be applied pro rata for the remaining initial term, toward the standard list price for this new edition or upgrade in transaction tier or number of users.

## Renewal Caps for Software Maintenance (PCP Only)

Renewal prices for Software Maintenance, if listed on your Order Form, will not increase by more than 3% per year (Price Cap) from the price listed on your most current Order Form; discounts listed on the Order Form will not apply to renewals. The 3% cap will apply as long as Software Maintenance is purchased each year with no periods without coverage (that is, as long as it is uninterrupted), and the customer is in compliance with the terms of its license agreements and any related documents.

## Product Releases

Acumatica's Product Releases are designed to deliver high quality versions of the product on a predictable schedule allowing customers to stay on the most current release of the product, and at the same time have ample time to preview major upgrades before going into production.

Each year we bundle several enhancements into two major releases. In addition to the major releases, Acumatica delivers regular minor updates (typically every 2-8 weeks) which primarily contain high severity fixes and changes that do not disrupt existing customizations or integrations. Acumatica uses a standardized process which allows its customers to schedule when and how they will receive major releases and minor updates. While upgrading to each Major release is not mandatory, it is highly recommended. At a minimum, customers should plan to upgrade at least once a year to ensure their version does not reach its retirement date, and to benefit from the additional functionality. With each new major release, Acumatica announces the support period for the release along with its expected retirement date. In most cases, each major release is supported for a period of 20 months before the release is retired.
