Acumatica Developer of the Year

Developer Spotlight

At Acumatica, we love our developers. Meet our featured developers and read their stories – where they work, what they do, and what makes them tick.

Developer of the Year for 2022

Stéphane Bélanger

CEO/Developer, Asgard Alliance Software https://www.asgardalliance.com/

Why did we pick this person?

Stéphane was received into the Developer MVP Program in 2020. But his recruitment started a year earlier, after he delivered a developer track session at our annual Summit on work as a developer and architect for a one of our customers. Since that time he has contributed by writing a number of insightful developer blogs over the past couple of years and sharing his deep developer skills at this past year's developer track at Summit as a guest speaker. He also participated in other community activities throughout the year.

He really distinguished himself in 2021, with his contributions to our community open source project - Acumatica Surveys as Robert Waite had done in 2020. He completely rearchitected and rewrote much of the code for Surveys adding a number of new features which will broaden it's adoption in 2022.

Developer Blogs | Sample Code

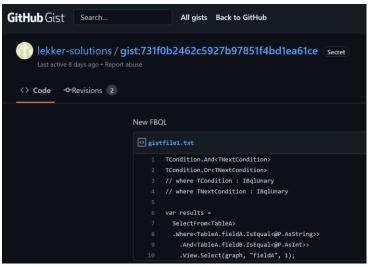

Fluent Conditions

The Fluent conditions approach uses dot-separated chaining of Tunary conditions. All **IbqlUnary** classes, including fluent comparisons, of the Acumatica core, can be used with fluent conditions. To append a condition to another one, just use **.And<Tunary>** or **.Or<Tunary>** nested classes of the first condition expression.

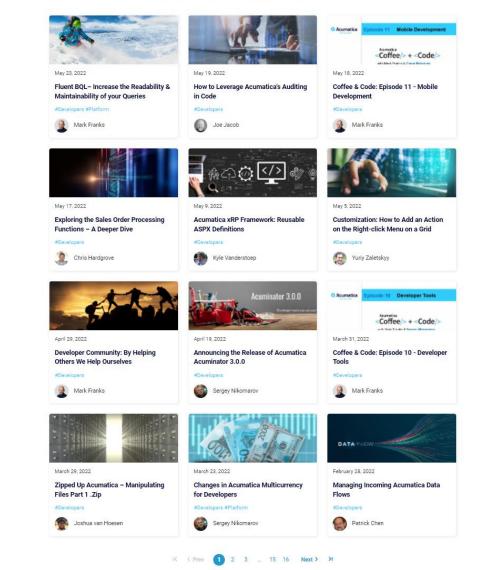

1	TCondition.And <tnextcondition></tnextcondition>				
2	TCondition.Or <tnextcondition></tnextcondition>				
3	// where TCondition : IBqlUnary				
4	// where TNextCondition : IBqlUnary				
5					
6	var results =				
7	SelectFrom <tablea></tablea>				
8	.Where <tablea.fielda.isequal<@p.asstring>></tablea.fielda.isequal<@p.asstring>				
9	.And <tablea.fieldb.isequal<@p.asint>></tablea.fieldb.isequal<@p.asint>				
10	.View.Select(graph, "fieldA", 1);

Episode 11

Dev MVP Program

Benefits

- One complimentary pass to Acumatica Summit each year
- Recognition at the Acumatica Summit
- Participation in MVP developer events at the Acumatica Summit (Hackathon & Dev Track)
- Individual Developer & Partner organization may use the specially designed MVP Developer Badge on resumes, company website, etc.
- A button-down shirt or polo with an embroidered Acumatica Logo and distinguishing MVP Developer Badge
- MVP developer Acumatica Summit Attendee badge

Dev MVP Program

Requirements | Commitments

- 18 Answered Acumatica Dev Question PER Year on Stackoverflow | Acumatica Community Site
- Two Guest Blog Post each year
- Sample Code Contribution GitHub | Other
- Attend Summit: Hackathon, Developer Track, & MVP
 Developer Events
- Extra Credit Present at Acumatica Dev Event & GitHub Dev Projects (Surveys)
